Challenger 2.25	OK	not recommended ¹	No fit	OK

¹ The Headwind Fan and Flywheel may cause premature wear on the 3.0 and 2.25 Poly endcaps, which is not covered under the lifetime warranty.

² The Headwind Fan can be installed on the Alloy 2.25 rollers, but it is not recommended due to the excessive amount of resistance that the combination will create. The 4.5 drums are the best match with the Headwind Fan.

³ The Headwind Fan can be added to the Alloy 3.0 rollers if more resistance is desired. However, if you are buying a complete new set of rollers, we recommend pairing the Headwind Fan with the 4.5 rollers to provide the widest range of workload.

⁴ The Kompact Frame is designed for the 3.0 and 2.25 rollers. It will fold compactly with either the 3.0 or 2.25 drums, regardless of where the front drum is positioned in the wheelbase adjustment plate. The 4.5 drums can be installed on the Kompact Frame, but it will not fold compactly in all wheelbase settings and the clearance between the ground and the 4.5 drums may be insufficient depending on the surface.
